

# SAFE PASSWORDS

Password are like our digital keys , and as you wouldn't let the keys to your house  to anyone else, your password most remain private and safe.

There's a way to now how to make a safe password...

**Do!!!**

**8 digits long**

**UPERCASE + lowercase**

**change passwords  
regularly**

**Do**

**not!!!**

**obvious passwods: 12345678,**

**monkey, \*yourname**

**one word passsword**

**same password everywere**

To make it even safer, there is as much websites that can help you, as there are fishes in the sea

# What would happen if...

If your password ends up in the wrong hands, that would be terrible!

They would have access to many of your personal information!

And there are many ways they can use it for the wrong matters

Ones they stole one of my friends social media password and pretended they were me

That sounds bad, tell us more about it

Her name is Karla Montserrat Cruz, right now she is studying at Tecnológico de Monterrey.

Two years ago someone, probably from her close social circle, use her password to enter to her instagram page and started using it as if it were their own. They mesaaged friends and posted stories. Luckily she found away to get back the account before there was any fourder damage. This time she used all the do's and do not's to secure it.

That sounds so bad!Imagine if she wouldn't have gotten back the account and it had made more damage, and this is only one of the horrible thing someone could do with a stolen password.
